

# BL ISO-FTAM

## ATLAS-FTAM for the secure message exchange over the Internet and VPN

### ATLAS Processing

For exporting goods from the European Union, a customs declaration must be submitted electronically to the customs administration. Since 2009, the *Automated Tariff and Local Customs Clearance System (ATLAS\*)* has been used for this purpose.

ATLAS provides for communication between transport companies and German Customs as an Internet-based VPN solution via FTAM. VPN connections are secured by IPSec tunnels with AES encryption. In addition to a public access for regular participants, an exclusive access with more bandwidth and high availability is offered for clearing houses and service providers.

The exchange of information between the participants and German Customs takes place via EDIFACT as well as per XML messages.

\*ATLAS is a registered trademark of the company ATLAS Transport GmbH in Düsseldorf.

### BL ISO-FTAM: The Standard Implementation

The reliable standard implementation as communication module for ATLAS processing is available for more than ten years. Thanks to the simple interface, integration into any environment and software is effortless.

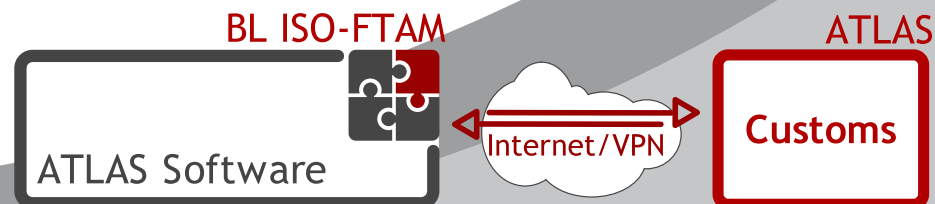

#### The advantages of BL ISO-FTAM at a glance:

- reliable base component of ATLAS-certified systems for many years
- support of Windows and Unix/Linux systems
- easy integration per file storage
- simple, parameterizable use
- fair license model

For distributors and vendors of existing and new ATLAS software we offer attractive special license conditions.

We are happy to provide interested parties with a free demo version.
